

## **Fourth Grade Power Standards**

Solve a 3-digit by 2-digit multiplication problem accurately using the standard algorithm. (4.1.F)

Recall 66 multiplications facts and their related division facts, 0-10, with 100% accuracy in 5 minutes. (4.1.A)

Compare and order decimals using tenths and hundredths on a labeled number line with reference points. (4.2.B)

Given a fraction with a denominator less than or equal to 10, students will be able to find an equivalent fraction, simplify the fraction, and convert any improper fractions to a mixed number. (4.2.C, F, G)

Determine the area and perimeter of a rectangle using the standard formulas. (4.3.C)

Determine elapsed time to the nearest minute using a digital and analog clock and to the nearest day using a calendar. (4.4.C)

Find the mean, median, mode, and range of a set of no more than 13 data points. (4.4.E)

In a problem situation determine the question to be answered and use one or more appropriate strategies to solve a single and multi-step problem. (4.5)

Problem solving is imbedded throughout the power standards.
